Develop technical knowledge and career skills through a case-based curriculum.

**Master of Accountancy**

The W. P. Carey Master of Accountancy (MACC) program can help launch your career in accountancy, auditing, or consulting. Nearly 100 percent of 2017 MACC graduates with U.S. work authorization were employed within 90 days of graduate.

In less than one year, you can earn your master’s, begin your career at an advanced level compared to recent college graduates, and join a supportive community of students sitting for the CPA exam. In fact, many students commonly pass the CPA exam while enrolled in our program.

Excellent scholarships and graduate fellowships are available for highly qualified students. A mentoring program pairs you with alumni who can offer advice on the program and your career path.

“
You get to network with a lot of firms in the MACC program, whether it’s the Big Four, mid-tier, or private firms. You get that connection in the W. P. Carey School you might not be able to get in another program.

"  

Zach Bellis, MACC 2016

**Start the MACC in January or August**

MACC alumni accepted offers in 26 cities after graduation (2014 to 2016).

The MACC fulfills current course requirements for the CPA exam.
In under a year, the curriculum will provide you with the skills to start your professional career in accounting. Through case-based projects and team exercises, you will expand your functional expertise, learn how to articulate views and insights, simplify complex ideas and challenge business assumptions, build your strategic thinking and communication skills, and expand your knowledge of business operations and emerging technology.

The MACC curriculum is updated each year with input from accounting professionals and alumni to reflect the dynamic nature of accounting careers.

### Quarter one

**Analytics for Accountants**
Examine analytics in the accounting function. Calculate, interpret, and apply descriptive, predictive, and prescriptive analytics in a variety of case settings focusing on auditing, risk management, forensics, and strategic planning decisions and events.

**Internal Controls Audit and Fraud Prevention & Detection**
Learn internal control frameworks and U.S. GAAS for financial statement audits and audits of internal controls. Define fraud: What it is and how it is committed, detected, and resolved.

### Quarter two

**Professional Accounting Research**
Apply FASB and IASB regulatory guidance to solve complex financial reporting issues. Improve your analytical, critical thinking, and communication skills through cases, class participation, and presentations, and learn how to use FASB Codification and eIFRS and how to write detailed and concise research memos.

**Advanced Auditing**
Build on undergraduate auditing concepts and master in-depth aspects of auditing, as well as emerging issues influencing the process and profession. Case studies will develop your critical thinking and analytical skills as they relate to auditing.

**Advanced Financial Accounting**
Learn advanced financial accounting topics, including consolidation (acquisition) accounting with outside ownership, intercompany transactions, and variable interest entities; derivative and hedge accounting of foreign currencies; equity-based compensation accounting; and foreign currency translation for financial reporting purposes.

### Quarter three

**Financial Forensics and Fraud Detection**
Focus on litigation support to apply the forensic process to real-world cases, and utilize best practices in planning, preparing, gathering, and preserving information; discovery; reporting; ethics; and testifying as a legal expert.

**Corporate Governance, Ethics, and Sustainability Reporting**
Build awareness and critical thinking skills around corporate governance structures, their strengths, weaknesses, and differing ethical norms. Through case studies and relevant articles, you will learn how environmental, social, and governance (ESG) metrics are changing traditional annual reports and the profession.

**Performance Measurement and Advanced Managerial Accounting**
Explore how managerial controls drive organizational performance. Case studies develop your critical thinking skills and knowledge of how organizations work in practice. Topics include responsibility accounting, risk management, performance measurement, and incentives.

### Quarter four

**Taxes and Business Strategy**
Address how taxes affect management decisions, strategic choices, asset prices, and financial and operational structures. Evaluate tax planning opportunities in U.S. and multinational settings and tax disclosures in financial statements.

**Shareholder Value Creation and Financial Statement Analysis**
Analyze financial statements and performance using financial ratio analysis and basic valuation techniques. Learn how changing valuation assumptions influences value estimates and practice methods of communicating your findings.
